# Soil 2 Grain

Come and join the discussion with researchers, local agronomists and farmers on the latest results, techniques and guidelines on Canopy and Disease Management interactions in cereal and canola crops.

## **Soil 2 Grain Workshop:**

**“Keeping crops greener for longer”**

**Maitland Golf Club, Maitland, Yorke Peninsula**

**Monday 2<sup>nd</sup> August 2010**

**9.00am - 1.00pm**

**Breakfast at 8.00 am**

### **Speakers:**

**Mick Faulkner (SA consultant & Mid North HRZ site co-ordinator)**

**Peter Hooper (SA Consultant & Hart Field Day site manager)**

**Mr Nick Poole (Foundation for Arable Research)**

### **Topics for discussion:**

- How can we improve the water use efficiency in our cereal crops through the use of canopy management?
- Which approaches to barley disease control have been most economic and how has new fungicide chemistry impacted on return over input costs?
- Examining two years of trials in wheat - Can crop sensors help us make better decisions about canopy management? – How do crop sensors link with the wider aspects of PA in the paddock?
- Green leaf retention – Could predictions of green leaf duration from APSIM help us make better decisions in crop?
- Disease management in cereals – Grower feedback on products, rates and timings along with project trial results in wheat.

### **Why come along?**

We feel confident that the meeting, the discussion and the results presented will help you with your agronomic decisions this spring. We look forward to seeing you at the meeting.

Nick Poole, Project Co-ordinator
