# JOIN OUR TEAM !

Since 2016, we've been working with some outstanding ag graduates through our **Regional Internship in Applied Grains Research** program.

Our interns live, work & play in the beautiful Clare Valley for a year and feel part of the team from the minute they arrive.

Apply now for your opportunity to join us, starting in February / March 2023.

**[www.hartfieldsite.org.au](http://www.hartfieldsite.org.au)**

## DEVELOP YOUR SKILLS

Gain skills in trial design & management, sampling and statistical analysis, and learn a range of communication methods as you engage directly with growers and advisors.

## BUILD NETWORKS

Work side-by-side with Hart's Research & Extension Manager and collaborate on-site with the state's best researchers, consultants & industry reps.

## MULTIPLE RESEARCH AREAS

Research areas include weed management & control, soil fertility & crop nutrition, crop entomology, agronomy, seeding systems, drought resilience and more.

## OUT & ABOUT

You'll also spend time with SARDI researchers at WAITE, collaborate on SA Drought Hub initiatives and attend other field days, workshops and industry events to broaden your knowledge even further.

# REGIONAL INTERNSHIP IN APPLIED GRAINS RESEARCH

## Information Sheet

This regional internship offers graduate students one year of training in applied grains research and extension and is based in Clare, South Australia with the Hart Field-Site Group (Hart).

The intern will work with Hart's Research & Extension Manager on a daily basis, and collaborate with other researchers, industry, consultants and growers to deliver research projects in regional South Australia.

They will gain skills in the areas of trial design and management, sampling, statistical analysis of data and written and oral communication with growers and advisers.

They will also assist with the preparation of Hart events (e.g. field days and workshops) and have the opportunity to network and attend industry events.

Hart conducts a large number of trials across the Mid-North and interns will contribute to research areas such as:

- Drought resilience
- Weed management and control
- Soil fertility and crop nutrition
- Crop entomology
- Agronomy and seeding systems

Research options may be tailored to the successful applicant's specific interests.

The successful applicant will receive a high level of training and support in all aspects of the role, while also having the opportunity to work independently.
